# 1. Description of the module

This user module is not installed on *Advantech* routers by default. See the *Configuration Manual* (references on page 4) for the description how to upload an user module to the router.

This user module is only compatible with *Advantech* routers of v2 and v3 platforms.

*OpenVPN Custom Config* user module can be used to configure up to four another OpenVPN tunnels on the router. This module has no classic configuration menu like the router's OpenVPN configuration page has. Configuration of one OpenVPN tunnel is declared in one field supporting the format used in \*.ovpn configuration file. Advantage of this solution is that an existing OpenVPN configuration can be easily applied to the router. The downside is, that there is no control for the configuration entered. You can then easily get into the situation when the tunnel is not established or not working as expected with limited possibility of issue debugging.

OpenVPN features and parameters stated in configuration manual (references on page 4) are only declared to be supported by this module.

## 2. Web interface

Once the installation of the module is complete, the module's GUI can be invoked by clicking the module name on the *User modules* page of router's web interface.

Left part of this GUI contains menu with *Status* section, followed by *Configuration* section which contains the configuration pages for all of four OpenVPN tunnels. *Customization* section contains only the *Return* item, which switches back from the module's web page to the router's web configuration pages. The main menu of module's GUI is shown on figure 1.

Figure 1: Main menu

## 3. Module usage

### 3.1 Configuration page

Configuration section of the module's GUI contains configuration pages for all of four OpenVPN tunnels, from *Tunnel 1* to *Tunnel 4*. Default state of configuration page for *Tunnel 1* is on figure 1.

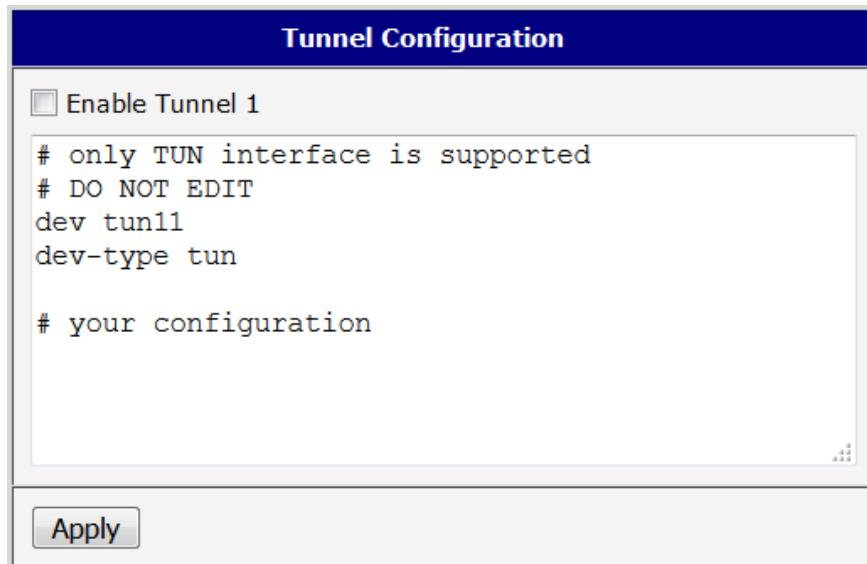

Figure 1: Configuration page - default state for Tunnel 1

As you can see, the configuration field begins with four lines which should not be edited. There are tunnel type and interface name declared on these lines. The interface name for *Tunnel 1* is *tun11* increasing to *tun14* for *Tunnel 4*.

Bellow these lines follows section four your configuration where you can put your configuration of the tunnel. Please note, that only OpenVPN features stated in configuration manual (references on page 4) of the router are declared to be supported by this module. Other settings may not work as expected.

An example of tunnel configuration is shown on figure 2. To save changes made in configuration click on *Apply* button. To apply the configuration and to create appropriate OpenVPN tunnel, check *Enable* box at the top and click on *Apply* button.

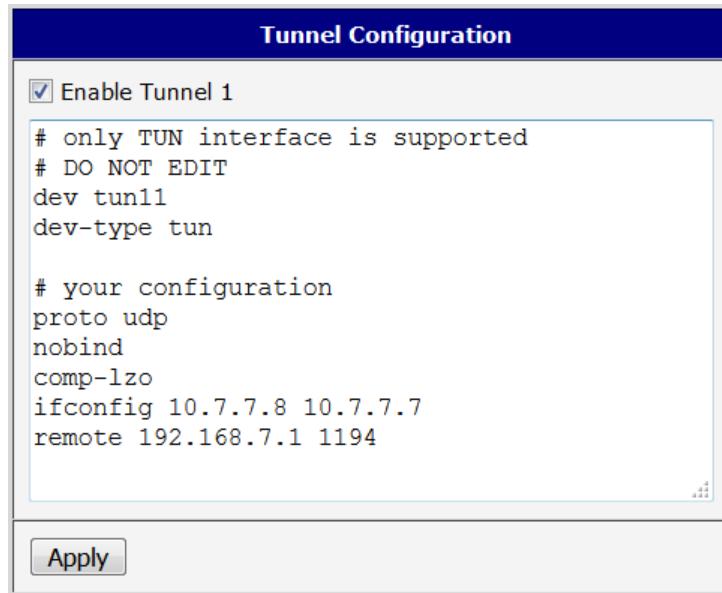

Figure 2: Configuration page - example

### 3.2 Status page

*OpenVPN Status* page lists status of all four OpenVPN interfaces. If the tunnel is initialised, the interface name and its status is displayed. If the tunnel is not enabled, the *Disabled* keyword is mentioned for the tunnel. An example of status page is shown on figure 3.

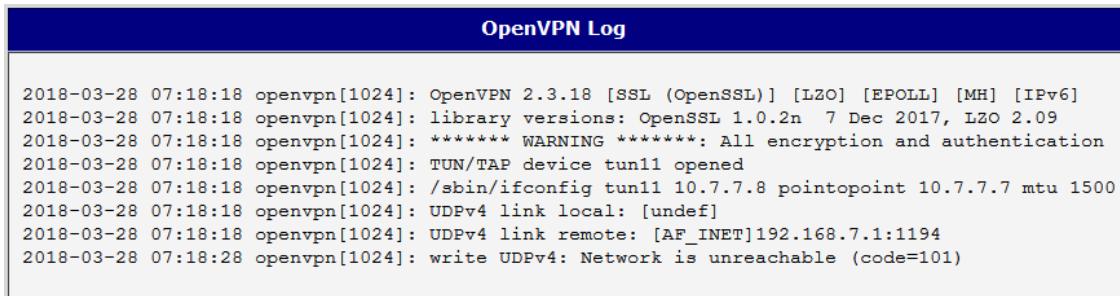

The screenshot shows the 'Overview' section of an OpenVPN status page. It displays the configuration and statistics for Tunnel 1, while Tunnels 2, 3, and 4 are listed as disabled. Tunnel 1 is configured with an interface name tun11, IP address 10.7.7.8, and a Mask of 255.255.255.255. The statistics show zero errors and dropped packets, and a txqueuelen of 100. Tunnel 2, 3, and 4 are all listed as 'Disabled'. The status page was updated on Wednesday, March 28, 2018, at 07:57:20.

```
Tunnel 1 :  
tun11      Link encap:UNSPEC  HWaddr 00-00-00-00-00-00-00-00-00-00-00-00  
          inet addr:10.7.7.8  P-t-P:10.7.7.7  Mask:255.255.255.255  
          UP POINTOPOINT RUNNING NOARP MULTICAST  MTU:1500  Metric:1  
          RX packets:0 errors:0 dropped:0 overruns:0 frame:0  
          TX packets:0 errors:0 dropped:0 overruns:0 carrier:0

post-decompress bytes,0  
END  
Tunnel 2 : Disabled  
Tunnel 3 : Disabled  
Tunnel 4 : Disabled
```

Figure 3: Status page

### 3.3 Log page

*OpenVPN Log* page lists detailed log messages of all four OpenVPN interfaces configured in this user module and also for all four standard OpenVPN interfaces configured on router's web GUI. These information may be helpful for debugging, especially for issues with initialization of the interface caused by an incorrect configuration. An example of log page is shown on figure 4.

The screenshot shows a log page titled "OpenVPN Log". The log output is as follows:

```
2018-03-28 07:18:18 openvpn[1024]: OpenVPN 2.3.18 [SSL (OpenSSL)] [LZO] [EPOLL] [MH] [IPv6]
